

Signup Automation Test Report

Project: Authorized Partner — Signup Flow

Script: signup_automate_script.py

Date: 2026-06-24

Tester: Automated run (local environment)

1. Executive Summary

- Objective: Verify end-to-end signup flow including OTP verification and profile completion.
- Result: PASS (script completed without unhandled exceptions during last run).

2. Environment

- OS: Windows
- Browser: Google Chrome (local)
- WebDriver: ChromeDriver (matching local Chrome)
- Python: 3.8+
- Libraries: selenium, mailosaur, python-dotenv

3. Test Data

- Randomized user: generated first/last name, email using Mailosaur test domain.
- Files uploaded: file.pdf used for verification attachments.

4. Steps Executed

- 1) Launched browser and navigated to <https://authorized-partner.vercel.app/>
- 2) Opened signup, accepted agreement, proceeded to setup step.
- 3) Filled personal details (name, email, phone) and submitted.
- 4) Retrieved OTP from Mailosaur and submitted to complete verification.
- 5) Completed agency details, selected target countries, and proceeded.
- 6) Filled professional experience, selected services, and submitted.
- 7) Completed verification step, uploaded required documents, and submitted final form.

5. Results and Observations

- OTP retrieval: Mailosaur message found and 6-digit OTP parsed successfully.
- Navigation: All expected step URLs were reached during the run.
- Form submissions: No client-side validation errors observed in scripted run.
- File uploads: Both file inputs accepted the provided PDF path.

6. Logs / Errors

- No unhandled exceptions raised during the last run (exit code 0).
- Any exceptions would be printed to console by the script's exception handler.

7. Recommendations / Next Steps

- Replace placeholder `file.pdf` with a real document for more realistic testing.
- Add assertions for visible success messages after each major step to strengthen validation.
- Parameterize browser driver path and add headless option for CI runs.
- Consider adding screenshots on failure for easier debugging.

8. Attachments

- file.pdf (used as upload sample)
- test artifacts: none (no screenshots produced)

Conclusion: The signup automation script exercised the primary happy-path of the signup flow and validated OTP han
